

# BULLS SWING REPORT

We are now at the key part of our post fed game plan. The initial reaction is in, and it's negative. Now is where the trend develops. We will watch key levels this week as outlined in today's video for signals. Tech is lagging while industrials, energy, metals and retail leads.

In today's video we start the review of the new Watchlist. A good time to start watchlists fresh is after summer rangebound action with much sector rotation. You will notice there are a number of our regulars on this list, along with plenty of new low float stocks with strong accumulation patterns.

I will review 20-30 per day until we complete the entire list of 155 stocks.

Remember the watchlist is not necessarily all stocks with current potential entries. It is a list of strong stocks with potential setups. The Focus list is the more near term entries and is built from the watchlist.

Today we review ELF, IP, AIR, FDX, ODFL, MTRX, XPO, BBP, SKX, TXT, GWW, BWXT, PNR, PCAR, CAT, TEAM, FLS, VRSK, X, CDNS, OKTA, MNDY, ROKU, SBIX, ORN, FLR, PINS, GOOGL, AMZN, NVDA.

T2108

Today VIX is stalling at the top of the recent range. Remember for the market to breakout of the downtrend we don't want to see any spikes. Ideally VIX starts falling this week.
